

VOLVO AUTOMATES

VOLVO EBAL · AI SYSTEMS AND AUTOMATION

I build the system that runs the business after the lead comes in.

Six businesses since 2023, across solar, electrical, lead generation, content and agency operations. I work in the tools a company already owns, I wire one process end to end before touching anything else, and I build the missing piece myself when nothing on the market does the job.

What I offer

Most engagements start as one of these three and end up using two.

01 GoHighLevel

CRM builds and repairs: pipelines, segmentation, reactivation campaigns that actually fire, and an AI voice or chat agent wired into the CRM so an inquiry that arrives at 9pm is answered at 9pm rather than the following morning.

Delivered for Omni Power Solar, Corlan Electric, Godzilla Digital

02 n8n and workflow automation

The wiring between the tools you already pay for. Records move between the CRM, the sheets, the inbox and the ad platforms without anyone retyping them, AI steps run in the middle, and the workflows that broke quietly get found and repaired.

Delivered for Leadworx.io, Your AI Army, Heartaccent

03 Custom applications, built with Claude Code

When no product on the market does the job, I build it. Eleven applications shipped to date, three of them live on the public internet and openable right now, each documented with the failure it taught me as well as what it does.

Database Reactivation, Colorly, SnapVault and eight more

Experience

Every figure below was stated by the client, not estimated by me.

TOOLS I HAVE SHIPPED WITH

AUTOMATION

- ☒ n8n
- ☐ Make.com
- ☐ Zapier
- ☐ Apify
- ☐ RapidAPI

CRM AND SALES

- ☒ GoHighLevel
- ☐ HubSpot
- ☐ Apollo
- ☐ Sales Navigator
- ☐ Intercom

AI

- ☒ Claude Code
- ☒ Claude
- ☐ Retell AI
- ☐ Gemini
- ☐ Grok
- ☐ DeepSeek

BUILD AND SHIP

- ☒ Node
- ☐ JavaScript
- ☐ Next.js
- ☐ Cloudflare Pages
- ☐ Vercel
- ☐ Supabase

VOICE AND OPERATIONS

- ☐ OpenPhone
- ☐ Slack
- ☐ Monday.com
- ☐ Dropbox

Omni Power Solar

Nov 2025 – Feb 2026 · Project

Inbound Voice Agent Builder

Designed and deployed an AI voice agent integrated with the CRM to handle inbound inquiries outside business hours, so after-hours leads were captured and qualified instead of going to voicemail.

40% more leads captured in month one

Leadworx.io

Nov 2025 – Jan 2026 · Project

n8n Workflow Developer

Built and maintained custom CRM integrations in n8n and GoHighLevel to automate lead reactivation, with accurate data syncing, segmentation and follow-up sequences running without supervision.

12 hours a week returned, three campaigns self-running

Your AI Army

Oct 2025 · Project

Automation Lead

Audited and repaired existing CRM and marketing automation workflows, removing duplication errors and improving campaign performance tracking.

8 workflows repaired, error rate down 70%

Corlan Electric LLC

Mar 2025 – Aug 2025 · Part-time

Back-end Tech Support and CRM Management

Built automated quotation workflows that cut manual processing time and improved response speed on inbound sales leads.

Quoting under 10 minutes, 20% less processing time

WHAT CLIENTS SAID

“We were bleeding leads after hours and didn't even know it. Volvo fixed that. 40% more leads captured the first month alone.”

Kevin Zucker, COO · Omni Power Solar

“Handed him a messy CRM and he gave us back 12 hours a week. Three campaigns running on their own now.”

Martin Williams, CEO · Leadworx.io

“Found issues in our automations we'd been ignoring for months. Fixed 8 workflows, cut our error rate by 70%.”

Dom Ricci, Team Lead · Your AI Army

“Quoting used to take forever. Now it's under 10 minutes and nobody has to touch it.”

Rob De Ciantis, Owner · Corlan Electric

“I stopped worrying about content schedules the day he set this up. 20 posts a week, automated.”

Tina Sivaraj, CEO · Heartaccent

“Five platforms, one clean system. Data stopped getting lost between tools.”

Seth Royce, Senior Developer · Godzilla Digital

Heartaccent LLC

Nov 2024 – Mar 2025 · Project

Pinterest Moderator and Automations

Implemented automated content workflows for consistent publishing, with engagement tracking and performance reporting that no longer needed manual assembly.

20 posts a week automated, 8 hours a week saved

Godzilla Digital LLC

Nov 2023 – May 2024 · Full-time

Junior Developer and CRM Specialist

Designed and maintained cross-platform automation integrating CRM, marketing and operational systems so records stayed consistent and campaigns ran reliably.

5 platforms unified, data loss between tools ended

Systems built under contract

Built inside a creative agency and in daily use. Described by what they do rather than by whose name is on them, because the client's name is theirs to publish, not mine.

IN USE

Voice-driven operations dashboard

Hold a key, say the task, and a runner daemon executes it and reports the result back.

IN USE

Drive-to-database client tracker

Sweeps every client folder nightly, diffs it against a database and reports new, changed and missing files by name.

IN USE

Seven research agents on one library

Packaged so a colleague can install the whole set and run it themselves.

IN USE

Three generation bots in Slack

Concepts, then scripts, then storyboards, each written into the real working document.

HOW I WORK

Every build carries its failure. I publish what broke and what it cost, not only what shipped. A portfolio that lists wins alone is a brochure.

Silent failure is the real enemy. Anything I build reports into a channel you already read, and says so when it stops.

Your tools, not mine. If it has an API or a webhook it can be wired in. If it does not, I build the missing piece.

I will tell you not to automate something. If a process does not cost real hours or real leads, automating it is a hobby.

IN USE

Multi-platform publisher

Write once, schedule to four networks, generate the creative in the same application.

IN USE

Local-business acquisition system

Map search that finds businesses with no website, builds them one, then manages what follows.

IN USE

Research database

The reference layer the generation tools read before they write anything.

Applications I built myself

Eleven shipped. Three open in a browser now, the rest run locally and I will demo them on a call.

LIVE

Database Reactivation

[open](#) >

An AI SMS agent that texts a CRM's dead leads, qualifies the replies and books the calls.

LIVE

Colorly

[open](#) >

An offline paint-by-number game with fifteen generators, built for my wife and daughter.

LIVE

SnapVault

[open](#) >

Backs up an iPhone's photos and video so the storage can be cleared. Installs to the home screen.

LOCAL

Phone Bridge

Scan a QR code and the phone sends files into a watched folder on the PC in realtime, with no app installed.

LOCAL

Video editor

Raw clips in, captioned vertical cut out. Cuts dead air, times captions to the word, ducks the music under the voice.

LOCAL

Video QA reviewer

Point it at a folder of review links; it downloads each video, runs the checks and posts the verdict back.

LOCAL

MLS prospecting agent

Runs daily across fifteen zip codes, finds listings whose photography is thin, scores them and drafts the outreach.

LOCAL

Pomodoro Cat

A focus timer whose break cannot be skipped: a cat walks across the live desktop and blocks input until the rest is over.

Where to reach me

A call is the fastest route. Everything else below reaches me the same day.

BOOK A CALL

calendly.com/volvo-ebal8/30min

Twenty minutes. Bring the process that is eating your week.

EMAIL

volvo.ebal8@gmail.com

Best for a brief, a document, or anything with detail attached.

WHATSAPP

+63 997 752 6687

Fastest for a quick question or a voice note.

LINKEDIN

linkedin.com/in/volvo-ebal

The work history, and where most clients check me first.

PORTFOLIO

volvo-ebal.pages.dev

The long version, with every build and the failure it taught.

How an engagement runs

- 1 **Week 0, we find the bottleneck.** Twenty minutes on a call. You describe what eats the most time. I tell you whether it is worth automating, and I say so when it is not.
- 2 **Week 1, one process wired end to end.** Not a platform, not a transformation. One process, working, inside your own tools, where you can watch it run.
- 3 **Then you keep it.** Handover with the runbook. If it breaks it tells somebody, because a silent failure is worse than no automation at all.
